FOOD & BEVERAGE PRODUCTION FLOORING

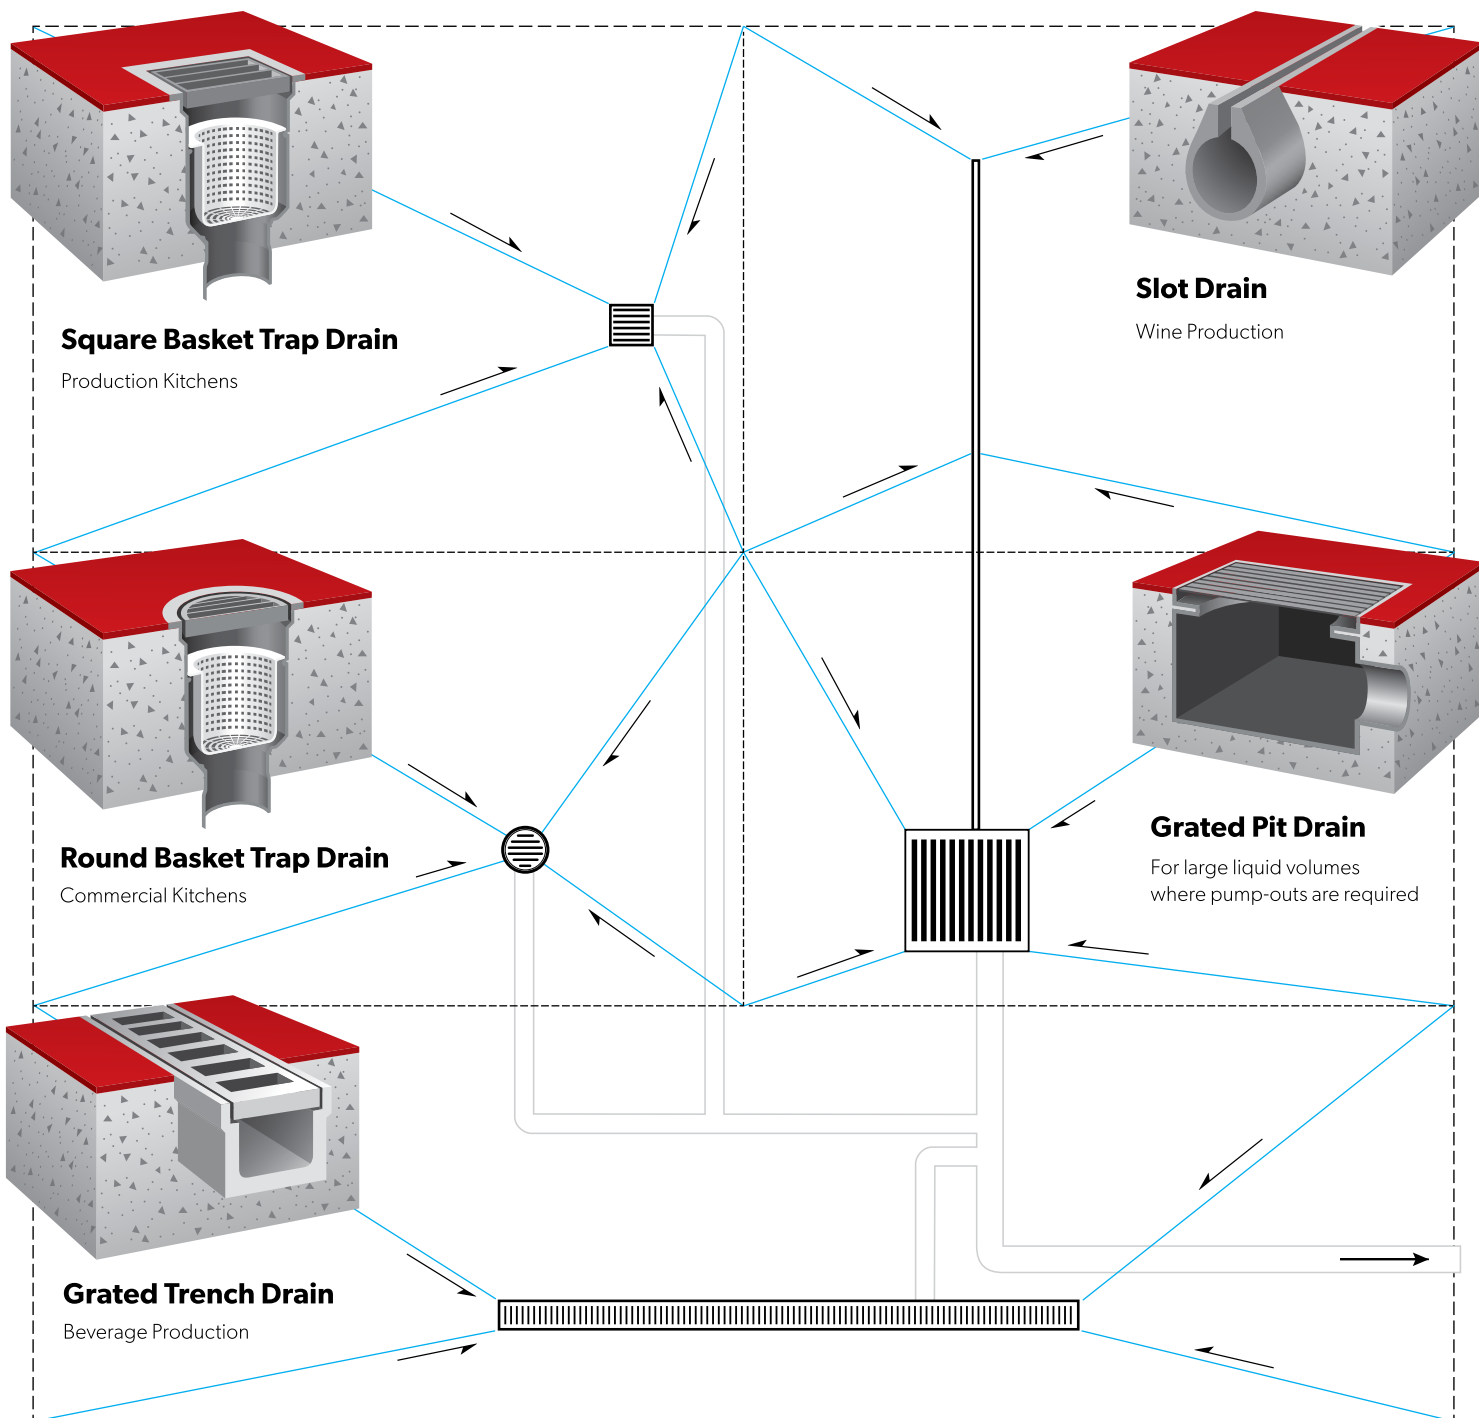

Drainage & Screeding

Typical Waste outlet options

The washing down of floors walls and equipment is a standard practice for food and beverage preparation and production. Correct falls result in ease of washdown.

Correct your levels and grading within the substrata

Achieve safe, dry floors with coving, graded screeding and a Roxset SE floor Coating

Floor Wall Coving to enhance run off

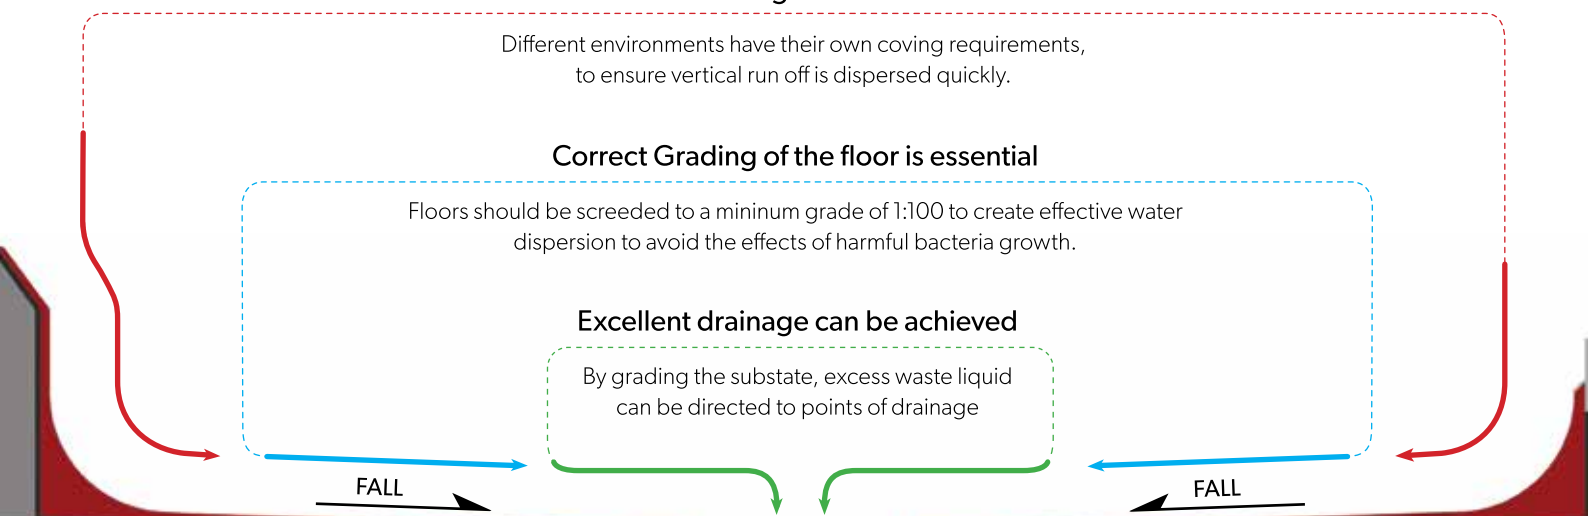

Different environments have their own coving requirements, to ensure vertical run off is dispersed quickly.

Correct Grading of the floor is essential

Floors should be screeded to a minimum grade of 1:100 to create effective water dispersion to avoid the effects of harmful bacteria growth.

Excellent drainage can be achieved

By grading the substrate, excess waste liquid can be directed to points of drainage

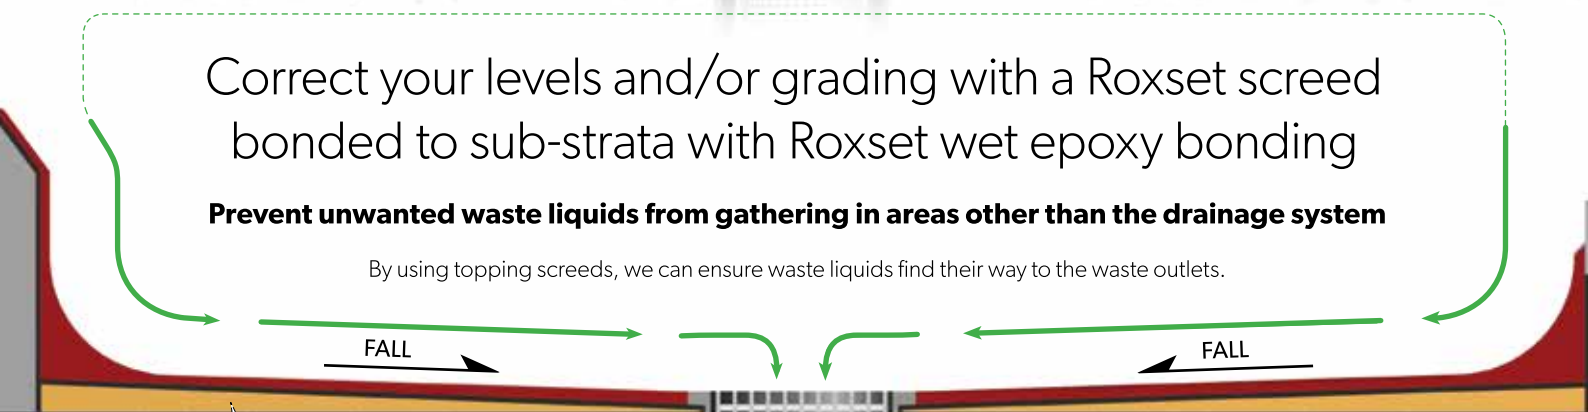

substrata graded to waste outlets

Correct your levels and/or grading with a Roxset screed bonded to sub-strata with Roxset wet epoxy bonding

Prevent unwanted waste liquids from gathering in areas other than the drainage system

By using topping screeds, we can ensure waste liquids find their way to the waste outlets.

Roxset Graded Topping Screed

Existing Substrata

Roxset is a food grade flooring system compliant with TGA, HACCP, BRC, AQIS & FSANZ

Please note this is general advice only contact Roxset for further details and advice.

Roxset[®]

The Roxset Difference

- ✓ Long term underfoot anti-slip solutions to ensure OH&S is maintained
- ✓ Rapid high volume out of hours installation service available 24 x 7
- ✓ Mobile servicing of remote areas including rural areas & overseas locations
- ✓ Re-engineer and construction of flooring and coving to ensure a seamless result
- ✓ Detailed heavy duty epoxy to coving, penetrations, hobbs & drainage
- ✓ Proven success in the industry with over 30 years experience
- ✓ Colour options with the ability to custom match any corporate colour desired
- ✓ High grade chemical resistance allow for ease of cleaning of blood, fats and oils and bacteria
- ✓ **Correct falls to floor wastes to ensure a protective impervious finish that permits effective drainage**
- ✓ Waterproof jointing and protection from moving heavy traffic vehicles

Waste Outlets, Plumbing & Drainage

The positioning and type of drainage is a critical factor when designing a new floor.

Improves the speed at which large amounts of liquids can be dispersed to the required waste outlets giving underfoot safety & slip resistance. There are a variety of options to choose from; All Roxset Flooring Systems with a trowel finish can be graded to waste outlets to ensure correct drainage. The Roxset team will work with your plumbers to achieve the correct infrastructure and upgrade or modify any plumbing works before laying the new floor. The Roxset team can provide advice and direction on floor waste options and drainage patterns.

Square Basket Trap Drain

Circular Basket Trap Drain
